Foreword

Partnership is the New Leadership

Let's start with the obvious: the continued rise of AI, and the return of the human. AI is transforming every sector, including education. Many innovations highlighted in this Collection integrate AI tools to enhance teaching, learning, or system efficiency. Yet as education systems race to adopt sophisticated technologies, labour market needs are quietly shifting in the opposite direction—towards human and interpersonal skills. This creates a compelling tension. While education systems strive to become more tech-oriented, employers increasingly value empathy, collaboration, and adaptability—the deeply human capabilities that machines cannot replicate.

Second, we are witnessing a rapid decolonisation of education delivery, especially across low- and middle-income contexts. Financial restructuring and the sudden cuts of global aid translate to stronger local ownership of how education is organised. In our recent [HundrED Innovator Aid Survey 2025](#), locally rooted organisations reported gaining ground as several international programmes scaled down or withdrew. This shift is empowering local actors to design solutions that are culturally grounded, community-driven, and financially more resilient.

Together, these two forces are creating both potholes and possibilities. Organisations reliant on traditional global funding channels are experiencing uncertainty, while those deeply embedded in their contexts

are discovering new momentum. Both, however, are increasingly turning to AI – not to replace human capacity, but to extend reach, personalise learning, and build resilience.

Resilience does not come from technology or funding alone, but from how available resources interact with and reinforce each other. Through HundrED's [Resource Portfolio](#) framework, we can see that the most enduring education innovations are those that align multiple forms of capital – financial, material, social, value-based, and time. The organisations featured in this year's Collection show that sustainability emerges when communities, teachers, and learners become co-owners of change, not merely its recipients.

In this changing landscape, partnership becomes the new leadership. No single organisation, government, or donor can navigate these transitions alone. Collaboration, mutual learning, and shared accountability are qualities that now define the frontrunners of educational change. Also, across the philanthropic sector, there is growing recognition that good governance is no longer about managing risk, but about trust-building and empowering partners to act, learn, and adapt together.

At the HundrED Foundation, we see this as a pivotal moment to strengthen the bridge between global funders and local innovators. We invite funders, governments, and education leaders to use our platform to identify proven solutions, to co-design pathways for scaling them, and align resources to maximise their impact for learners near and far.

Finally, on behalf of the whole HundrED community, I extend warmest congratulations to all the innovators selected for the *HundrED Global Collection 2026*. Your work shows what becomes possible when creativity meets courage, and partnership truly becomes leadership.

Lasse Leponiemi

CHAIR,
THE HUNDRED FOUNDATION

Overview

In 2025, against a backdrop of turbulent global politics, economic uncertainty, and shifting of financing, innovative solutions in education continue to provide hope. It is built daily through concrete solutions in classrooms, schools, communities, and systems; solutions that not only respond to the most pressing challenges, but also harness emerging opportunities to extend benefits to the learners, and ultimately to society at large.

HundrED Global Collection exists to identify and amplify such solutions. Every year, we curate and share 100 of the most impactful and scalable innovations of the year, providing recognition, visibility, and opportunities for their growth. The Global Collection 2026 continues this tradition with nearly 800 submissions from around the world, reviewed by our diverse Academy of experts, educators, and youth. The 100 selected innovations span fifty-two countries and six continents, showcasing a remarkable diversity of approaches and a collective reach of millions of learners and educators.

This report offers a window not only into the breadth of ideas, but also the efforts and determinations behind them. Innovators are navigating shrinking budgets, volatile aid, and uneven access to resources, yet they continue to push forward. **Their work reminds us that innovation in education is not a luxury, but a necessity for every child to**

flourish. They show how educators, students, and communities are reimagining learning to ensure equity, foster wellbeing, integrate technology responsibly and efficiently, and build future-ready skills. The pages that follow share their stories, highlight emerging trends, and invite policymakers, educators, and learners everywhere to join a global community committed to ensuring that every child can flourish, no matter what the future holds.

We extend our heartfelt appreciation to everyone who made this year's Global Collection possible: to every innovator who submitted their work and shared their vision; to our Academy members who devoted their time and expertise to carefully reviewing and evaluating hundreds of innovative solutions; and to the many community members around the world who represent HundrED, recommend inspiring initiatives, and introduce our mission to their own networks. Your dedication, insight, and generosity are the foundation of this Collection.

HundrED's Mission

HundrED, a Finland-based mission-driven global organisation, identifies, researches and shares inspiring innovative solutions in K12 education. Our goal is to help improve education and foster a movement through encouraging impactful and scalable innovative solutions to spread across the world, while staying mindful of context.

The purpose of education is to help every child flourish, no matter what happens in life.

As such, assessment has to be aligned with the core purpose of helping children flourish and all of this should be reflected in the learning environments of the future.

In a fast changing world, focusing on traditional academic skills will remain important, but that is not enough. To thrive as global citizens, children must be equipped with a breadth of skills. While we are advocates of a child-centric approach and personalised, passion-based learning, the relationship between an inspired teacher and a motivated student will remain essential.

To make this happen, we need visionary leadership at every level of our education system with ambitious, impactful, and scalable innovative education solutions that are effective globally. The world of education is full of hardworking specialists who are making this happen every day. **Our mission at HundrED is to give them the recognition and visibility they deserve.**

HUNDRED'S THEORY OF CHANGE

We believe that through validating, resourcing, and facilitating the implementation of innovative solutions in K12 education, our global education systems can be transformed and students equipped with the skills to thrive as global citizens.

Figure 1: HundrED Theory of Change

Photo by Masters of Trivia.

HUNDRED'S APPROACH TO INNOVATION

At HundrED, we see innovation in education as meaningful improvement that helps every child to flourish. Innovation is not always about new technology and tools, but about practices and ideas that respond to real needs, create positive change, and can be shared across different contexts. Rooted in local realities and challenges, these innovative solutions hold potential to inspire and inform solutions globally.

Our approach recognises that innovation is not a fixed recipe to be repeated, but a continuous process that requires resourcing, nurturing, and sustaining. Financial support matters, but relationships, shared values, trust, and time, often left unrecognised, are the main resources that give innovators the energy to persist. In our work with innovators, we see resilience, collaboration, and determination at the heart of how they adapt and carry their goals forward, even amid disruption and uncertainty.

By identifying, amplifying, and connecting these efforts, HundrED fosters a community where innovators are heard, ideas are exchanged, and practices are strengthened. Within this community, innovative solutions are spotlighted, gaining recognition and the support to scale in all directions. In this way, every contribution, whether small or large, becomes part of a collective movement towards quality, equitable, accessible education for all children.

Trends in the Global Collection 2026

External Influences on Global Education in 2025

Education does not operate in isolation. Political decisions, economic pressures, and technological shifts continue to shape classrooms worldwide, and 2025 has been no exception.

POLITICAL AND FINANCIAL SHIFTS

The sharp contraction of international aid emerged as the year's most significant policy shock. UNESCO reported a steep drop in global education aid in 2024, with further decline projected by 2027.¹ Low- and lower-middle-income countries already face an annual 97 billion USD financing gap to meet education targets.² At the same time, the United States confirmed its withdrawal from UNESCO by 2026, heightening concerns about the stability of multilateral cooperation.³ Furthermore, the closure of USAID in early 2025 created an especially deep void. Previously the world's largest bilateral funder of education with more than 1 billion USD in annual budget, it disbursed funds to support such critical education needs as foundational learning, teacher training, and expanding access for girls and refugees at risk.⁴

This funding shift reflects not only declining budgets, but also a shifting of national priorities. Increasing defence expenditures, together with the global cost-of-living crisis, are crowding out essential investments

in education and other social services.⁵ This means fewer resources in terms of national and international funds to strengthen schools, support teachers, and reach vulnerable learners. The consequences are most severe in communities destabilised by conflict and climate-related disasters, where education is a lifeline, providing safety, continuity, and hope amid instability.⁶

EDUCATION IN CONFLICT AND CLIMATE EMERGENCIES

Crisis, both conflict-driven and climate-related, continues to be a defining force that is re-shaping global education in 2025. Education Cannot Wait reports that 234 million crisis-affected children now require urgent support to access quality education, an increase of 35 million over the last three years.⁷ Of these children, 85 million receive no schooling at all, while even those enrolled face severely disrupted learning and critically low outcomes, with just 17 percent achieving foundational skills.⁸

Safety at schools is an escalating concern. UNESCO recorded a 44 percent increase in attacks on schools in 2024, leaving students and teachers directly exposed to violence and making classrooms unsafe spaces despite the protection under international law.⁹

Climate-related disasters compound these threats: floods, droughts, and storms destroy infrastructure and displace families, interrupting education for millions more. In 2024 alone, climate disasters disrupted schooling for at least 242 million students across eighty-five countries, with 74 percent of these affected children living in low- and lower-middle-income countries, adding urgency to an already severe learning crisis.¹⁰

Taken together with financial and budgeting shifts, these trends show that the crisis is no longer a temporary disruption but a destructive force shaping education in 2025. Sustaining learning requires coordinated global action that treats education as both a humanitarian lifeline and a pathway to structural stability and resilience.

TECHNOLOGY AND ARTIFICIAL INTELLIGENCE: SECTORAL SHIFTS IN 2025

In parallel with financial and political upheavals, 2025 saw a rapid transformation in governance and investment around technology and artificial intelligence with direct implications for education. Governments and international organisations have been rapidly working towards establishing guidance on ethical and responsible use of AI, such as adoption of European Union's AI Act and implementation progress on UNESCO's Recommendation on the Ethics of Artificial Intelligence.¹¹

Private sector investment in edtech and AI applications continues to accelerate. Market research projects the global edtech market to be approximately 252.5 billion USD, a 17.3 percent increase from the previous year, with AI-enabled platforms accounting for a rapidly increasing share.¹² Companies are focusing on personalised learning systems, adaptive testing, and digital tutoring, while also expanding into teacher-support tools that promise to reduce administrative burdens.

Multilateral agencies are also positioning technology at the centre of global cooperation while cautioning that without deliberate policy measures and equity frameworks, there is a risk of deepening inequality, particularly where digital infrastructure is lacking, thereby shifting education governance away from the public sector.¹³ AI in education continues patterns long visible in the edtech sector, where private firms have been able to monetise education services while also influencing national priorities, thus, contributing to the rising concerns

about the balance between public sovereignty and private interests.¹⁴ In short, 2025 marks a turning point where the governance, regulation, and investment landscape of AI will decide whether AI becomes a tool for equity and opportunity, or another challenge leading to inequality.

Key Trends in This Year's Collection

“The innovations featured in the HundrED Global Collection 2026 are not only impactful and scalable, they also embody resilience, and adaptability. As we approach 2026, two major forces are reshaping the education landscape worldwide, both vividly reflected in this year's Collection.” – **Lasse Leponiemi,**

Chair of the HundrED Foundation

Across this year's Collection, the rapid rise of technology meets a renewed focus on keeping learning human. Innovators are centring around equity and access, strengthening wellbeing, addressing learning gaps while building future-ready skills, integrating technology more meaningfully, and advancing sustainability as a core educational value. Together, these priorities reveal how education changemakers are balancing innovation with inclusion, and progress with purpose. This section unpacks these trends through a closer look at the key foci, skills, methods, and tools featured in the Global Collection 2026.

KEY FOCUS: EQUITY, ACCESS, AND FUTURE READINESS (FIGURE 1)

The 2026 Collection shows that innovators are placing the strongest emphasis on **education equity and access**. Almost one in every five selected innovations listed these as their key focus, reflecting the urgent global priority of ensuring all learners, especially those in marginalised or crisis-affected settings, can access and participate in quality education.

Wellbeing continues to be a significant focus, with selected innovations addressing mental health, resilience, and holistic development. **Sustainability** and **STEM education** were equally emphasised, reflecting the dual global imperatives of equipping children with skills, knowledge, and awareness needed to respond to long-term challenges.

KEY SKILLS: BALANCING FUTURE COMPETENCIES AND STRONG FOUNDATIONS (FIGURE 2)

The skill priorities in the Global Collection 2026 show a clear dual emphasis. Innovators strongly lean towards future-oriented competencies—such as **21st century skills**, **SEL (social and emotional learning)**, and **critical thinking**—signaling a recognition that adaptability, collaboration, and resilience are indispensable in preparing the children for a world that is increasingly described as VUCA: volatile, uncertain, complex, and ambiguous.

Innovators in the 2026 Collection did not just look ahead, they also looked back to basics. Alongside strong interest in future skills, the frequency of selections for **Literacy** and **Foundational Skills** shows a clear awareness of learning gaps. Global indicators like learning poverty (over half of children in many low- and lower-middle-income countries are unable to read a simple text by age ten), underpin this urgency.¹⁵

KEY METHODS: ACTIVE, COLLABORATIVE, AND WHOLE-SCHOOL APPROACHES (FIGURE 3)

Interactive and learner-centred methods are the preferred approach for the innovators. **Collaborative learning** and **project-based learning** lead the list for the key methods, showcasing how innovators are prioritising teamwork, problem solving, and real-world applications over

rote instructions. These approaches, along with **play-based learning**, align with wider pedagogical shifts that emphasise learner-centred and authentic learning experiences.

The prominence of **edtech** reflects its continued role in the education landscape, but a closer look into the Collection reveals that it is consistently paired with approaches like personalised learning, project-based learning, gamification, and assessment. This underscores edtech's role as an enabler that strengthens student-centered, student-led methods rather than as a stand-alone approach. **Whole-school models** highlight innovators' drive for a systemic approach, embedding innovative solutions across leadership, teaching, and community engagement to create supportive learning environments.

KEY TOOLS: BLENDING DIGITAL, SUSTAINABLE, AND PLAYFUL RESOURCES (FIGURE 4)

Among the tools most frequently cited by innovators, **digital programmes** dominate, reflecting the steady integration of technology into learning delivery and management. **Sustainable resources** follow closely, highlighting innovators' commitment to environmentally responsible practices and the use of locally sourced or renewable materials. **Games** also emerge as a core tool, showing the continued appeal of playful learning to motivate and engage learners across age groups. **Books** remain a trusted and accessible medium, while the popularity of **networks** points to the growing importance of collective learning and collaboration.

Last year, we noted that while **artificial intelligence** (AI) holds great promise for adaptive learning and personalised assessment, educators remain cautious about its risks and about the lack of instructional tools to guide students in its safe and effective use.¹⁶ Interestingly, this caution is also reflected in the Global Collection 2026: although AI is a major theme in global education debates, it does not appear among the top three tools in the 2026 Collection. This suggests that for many innovators, AI might still be at an exploratory stage rather than a widely embedded practice. Furthermore, this can be an indication that innovators are prioritising accessible, proven tools and the human relationships at the core of learning, while recognising that AI adoption will likely grow as guidance, capacity, resources and infrastructure develop.

HAS THE GLOBAL COLLECTION 2026 ADDRESSED THE NEEDS WE IDENTIFIED IN LAST YEAR'S REPORT?

In the previous year's report, we asked whether Global Collection 2026 would identify more innovative solutions addressing systemic equity, teacher wellbeing, creative learning environments, climate resilience, and education, and digital citizenship. This year's Collection gives us some answers.

Quality education for all emerged strongly, with equity and access together representing the most frequently chosen key focus areas. Many of this year's innovations are working with the marginalised learners by supporting learners in emergency contexts, rural communities, girls, and out-of-school children; thus, highlighting the shared commitment to reaching those children who are at the most risk of being left behind.

We also saw notable progress in **innovative learning environments**. Play-based and outdoor models, whole-school approaches, and digitally enabled classrooms all featured prominently, reflecting the energy innovators are putting into reimagining where and how learning happens.

Teacher wellbeing and professional growth were also visible, though less dominant than we had hoped. Selected innovations approached the needs of the teachers in different ways: through providing professional development, collaboration and peer learning, reducing workload by

Figure 2. Global Collection 2026 selected innovations' key focus

Figure 3. Global Collection 2026 selected innovations' key skills

Figure 4. Global Collection 2026 selected innovations' key methods

Figure 5. Global Collection 2026 selected innovations' key tools

offering teaching resources and assistance, or providing mental health support for educators. These efforts indeed are affirming the recognition that professionally- and emotionally-ready teachers are critical for achieving and sustaining learning. However, these innovations' overall share in the Collection suggests this is an area where more innovative solutions and visibility are still needed.

Sustainability was strongly present in this year's Collection, with many innovations weaving environmental awareness, responsible resource use, and ecological education into their models. However, when it comes to **climate resilience** specifically, the ability of education systems and communities to withstand and adapt to climate-related shocks, the picture is more limited. A handful of selected innovations connected learning with resilience strategies, yet overall the representation is modest compared to the scale of climate disruptions affecting education worldwide. This suggests that while sustainability is gaining ground, innovative solutions that directly address climate resilient systems remain an emerging field.

Lastly, **digital citizenship** did not feature strongly in submissions or the final selection. While edtech tools and digital programmes are now the most widely used tools across the Collection, relatively few innovators explicitly address safe, ethical, and inclusive digital participation. This mirrors global policy debates: AI and digital tools are advancing rapidly, but much-needed guidance on digital responsibility lags behind.

Looking to 2027

As we look beyond 2026 Collection, the next set of pressing priorities are coming into view. Teacher wellbeing, education in emergencies, and the equitable and ethical adoption of AI stand out as critical areas where we hope to see more innovative solutions in the coming year.

Teacher wellbeing and retention are urgent. UNESCO estimates that 44 million additional teachers will be required globally by 2030, with more

than half of these needed just to replace those leaving the profession.¹⁷ Attrition rates have been on a continuous hike. New teachers are especially vulnerable, often leaving the profession within the first five years due to limited mentoring, lack of collaborative opportunities, insufficient resources, and overwhelming workloads. Poor pay, limited career progression, classroom size, and unsustainable workloads also contribute to teacher burn-out.¹⁸ This year's Collection included promising initiatives around professional development, peer learning, and wellbeing support; however, addressing global teacher related challenges calls for systemic approaches that can be scaled across diverse contexts. Building a sustainable teaching profession requires solutions that lighten workload, elevate teacher voice, and embed wellbeing into the core of how schools operate. Unless the structural causes of stress, burnout, attrition, and inequity are addressed, even the best innovative solution can risk adding pressure rather than relieving it.

Education in emergencies stands out as a field where new solutions are urgently and continuously needed. The earlier section of this report already shows how conflict, displacement, and climate disasters are no longer temporary disruptions but destructive forces shaping global education.¹⁹ What this means for innovation is clear: education systems need approaches that ensure continuity of learning even in the most unstable conditions. Although we identified a few innovations designed to support learning in emergencies or inhospitable environments for this year's Collection, the scale and diversity of the challenge calls for more. In next year's Collection, we hope to see more solutions designed with this reality in mind – portable and low-resource solutions that reach displaced learners, trauma-informed approaches that support children and teachers under stress, and strategies that integrate crisis response into mainstream education planning.

Finally, the equitable and responsible use of AI remains a frontier. AI adoption in education is accelerating, with the global edtech market projected to surpass 700 billion USD by 2030. Still, this year's Collection, partially driven by AI-enabled educational solutions, shows that AI is not yet a mainstream tool.²⁰ For the 2027 Collection, we seek innovative solutions that experiment with AI in ways that are accessible, fair, and anchored in ethical principles and that ensures the technology becomes a lever for opportunity rather than a source of challenge, and a driver of inclusion rather than exclusion.

Voices from our Community

This section brings together voices from across the HundrED community. Innovators reflect on the resources, opportunities, and challenges shaping their work in today's changing education landscape, while our global Youth Ambassadors share how they see innovation empowering young people and reimagining learning for the future. Together, their perspectives reveal both the realities driving education innovation and the hopes that inspire it.

INNOVATORS' VOICES: NAVIGATING SHIFTING FUNDING LANDSCAPES

Across the Global Collection 2026, innovators described how volatile funding and external conditions have reshaped their opportunities and challenges. Their reflections highlight a shared reality: while aid contraction and rising competition for resources have created obstacles, these pressures have also spurred creativity, resilience, and new models of sustainability. This echoes findings from our recent *HundrED Innovator Aid Survey 2025*, which showed that in the face of funding volatility and shifting priorities, many organisations responded with collaboration, adaptive business models, and a determined focus on sustaining impact despite shrinking resources.²¹

"Cuts in international aid have created a funding vacuum that can leave innovations such as iLearnabout without support and make new backing even harder to find, as scarce resources are stretched across urgent needs. Programmes such as HundrED provide a vital opportunity for exposure to potential funders and supporters, ensuring children in Africa do not miss out on essential conservation and climate education at a time of accelerating biodiversity loss and climate change." – **Anne Tudor, iLearnabout**

"The recent global funding crisis, coupled with the growing marginalisation of immigrant and refugee communities, has made fundraising for Peace Tracks especially difficult. Yet these challenges have also created new opportunities: individual donors have stepped forward to help fill critical gaps, and I've seen the global humanitarian community come together with renewed solidarity. For me personally, these shifts have only strengthened my resolve to keep building peace through creativity and connection, no matter the obstacles." – **Sandra Rizkallah, Peace Tracks**

"As a mission-led venture that started at Stanford and now works across South Asia and the Middle East, we've had to adapt to a changing funding landscape where large checks increasingly go to highly scalable, AI-first tools, while contextually grounded innovations like ours, blending physical kits, teacher training, and low-tech AI often get overlooked. That said, this pressure has sharpened our clarity. We've doubled down on what makes us different: building tools with teachers and learners, not just for them. The constraints have made us more creative, adapting AI to work offline, simplifying data collection, and finding non-traditional partners who believe in equity-first innovation." – **Kavindya Thennakoon, Tilli**

"Shifting external conditions have opened new avenues for collaboration. Our approach now actively involves schools, organisations, and professionals in co-curating content. This has enriched the quality of our learning materials, aligned them with global health and climate priorities, and increased trust among learners. It has also positioned Smarty as not simply a content provider, but as a collaborative hub where knowledge, creativity, and professional expertise converge. These changes have taught us that innovation thrives not in isolation but through networks and partnerships. The challenge is immense, yet so is the opportunity. Together, we can ensure that young people everywhere grow up empowered with the knowledge and skills to make informed decisions for their health and future." – **Phillip Andrew Mwebaza, Smarty Health Info Hub**

YOUTH VOICES: WHAT EDUCATION SHOULD BECOME

Young people in our HundrED community shared candid reflections on what they see as education's greatest challenges, how innovative solutions might help, and what they wish innovators would focus on. Across diverse contexts, their voices converge on three themes: the need to address inequality and outdated teaching, to empower youth by connecting learning with real-world action, and to prioritise more personalised, inclusive, and meaningful education.

Photo by PadHer.

WHAT ARE THE BIGGEST CHALLENGES IN EDUCATION TODAY, AND HOW CAN INNOVATIVE SOLUTIONS HELP ADDRESS THEM?

"The biggest challenge is unequal access and a focus on rote learning. Students often miss out on critical thinking and creativity. Innovative solutions like digital platforms and project-based learning can help. They make education inclusive, personalised, and skill-focused." – **Fizza Fatima Zille Hyder**

"One of the biggest challenges in education today is that students often don't feel comfortable or confident while learning, which leads to ineffective learning and an inability to share their opinions and ideas with others. To address this problem, I believe teachers or mentors should check in with every learner to help them feel comfortable during collaborative activities and ensure that each learner feels involved. Additionally, giving constructive feedback and incorporating more group activities can act as ice breakers and support individual learners." – **Rigzen Choden**

"I believe the biggest challenge in education today is not just about access, but about relevance. Too often, students are asked to memorise knowledge that feels disconnected from the world they live in. This creates a gap between what we learn and what we truly need to navigate complex issues like climate change, inequality, or the rapid growth of AI. Innovative education solutions, such as project-based learning, AI-powered personalised tools, or STEM programs tied to real community problems, can bridge this gap by making learning meaningful, adaptive, and future-oriented." – **Anakya Danke Cetta Akhbar**

HOW CAN EDUCATION HELP YOUNG PEOPLE FEEL EMPOWERED TO ACT ON ISSUES THEY CARE ABOUT?

"Young people feel most empowered when they know their voices actually matter. Education shouldn't only be about memorising facts. It should also help these students build confidence to drive change in their community. Innovative solutions like project-based learning, youth-led programs, and platforms where

students can share ideas make us feel seen and heard. When we're encouraged to connect what we learn to real-world problems, like climate change, inequality, or mental health, we start to see ourselves as leaders who can make an impact right now, not just someday."

– **Chloe Soerjanto**

"Education can empower children and youth by giving them not only knowledge, but also the confidence and tools to act on the issues they care about. Too often, education is framed as passive, students absorb information and repeat it in exams. But if schools create spaces where young people can

debate, collaborate, and link what they learn to real-world challenges, they begin to see themselves as active participants in society rather than bystanders. Innovative solutions in education can accelerate this. When students are given that sense of agency, they don't just learn about the world, they begin to shape it." – **Manuela Medeiros**

IF EDUCATION INNOVATORS COULD FOCUS ON ONE THING TO IMPROVE LEARNING, WHAT SHOULD IT BE?

"If education innovators could focus on one thing, it should be making learning more personalised and practical, so every student can learn at their own pace while connecting what they study to real-world problems and opportunities. This would move us beyond memorisation and help us build skills that truly prepare us for life." – **Sarbjit Singh Bal**

"It could be a learning experience that empowers learners to pursue their interest and passion. This is to make education more motivating and meaningful. Furthermore, it will help learners to show and prove their abilities, passion, determination, and capabilities towards education." – **Naomi Chabu**

"If education innovators could focus on one thing, it should be making learning more engaging and relevant. Too often, education is about memorising facts instead of exploring ideas. I believe learning should spark curiosity, creativity, and problem-solving. When students feel connected to what they're learning—and see how it relates to real-world challenges—they feel motivated and empowered. Technology and new teaching methods can help personalise this experience, but the heart of it is making education meaningful." – **Thinlay Phuntsho**

The Collection by the Numbers

This year we selected 100 innovators from 52 countries. What follows is the story of their selection, depth, spread, and reach—told by the numbers.

The Global Collection 2026 is not only about innovative approaches and solutions, but also about their measurable impact. This year's collection spans diverse origins and global reach, touching millions of learners, educators, and communities worldwide. The numbers highlight where innovations began, how far they have spread, and the target groups they serve.

Figure 6. The HundrED Global Collection 2026 represented by the numbers

GEOGRAPHIC SPREAD

Figure 7 illustrates the percentage share of innovations from each continent at three stages of the Global Collection process—submission, shortlist, and final selection. The inset highlights countries that stood out with three or more selected innovations, showing where innovation activity is most concentrated within each continent.

- Asia continues to be the innovation hub: Almost four in ten submissions came from Asia, and even after the selection process, the region still accounts for nearly one-third of the Collection. Within the region, India stands out as a major innovation hotspot, with the highest number of submitted, shortlisted, and selected innovations.
- Africa gained ground: While Africa represented about 20 percent of submissions, its share rose to 21 percent in the final selection, a sign of strong top-quality innovative solutions.
- Oceania is small but mighty: Starting at under 3 percent of submissions, it doubled its share in the shortlist and held steady at 6 percent in final selections.
- North America and Europe slipped slightly: While both regions submitted strong innovative solutions, their shares declined from submission to final selection, an indication of tougher competition this year.

EVOLUTION OF THE COLLECTION

The line graph in Figure 8 shows how the share of selected innovations from each continent in the Global Collections has evolved since 2019. The trajectories highlight Asia's consistent dominance over the recent years, Africa's overall upward trend despite a slight dip, more fluctuating patterns in Europe and North America, and Oceania's gradual rise from a small base. The inset captures the latest year-on-year change.

Figure 7: Geographic Spread of Submissions, Shortlist, and Selected Innovations for Global Collection 2026

Figure 8: Trends in the Share of Selected Innovations by Continent, 2019–2026

COLLECTION SUPERLATIVES

Figure 9: Global Collection 2026 superlatives

HundrED Academy 2026

Each year, in its quest to find the 100 most impactful and scalable education innovations worldwide, the HundrED Research Team looks to a global community of experts to evaluate the shortlist. In early June, veteran and newly selected Academy members volunteer their time to carefully read through innovation pages, application forms, websites and extra documentation. Their scores and comments are then synthesised by the Research Team to present a full picture of all shortlisted innovations during the final selection process. Academy members think contextually, critically evaluating whether an innovation has or could have scale and impact, and whether an innovation is speaking to current needs in education. This year's Global Collection would not have been possible without the invaluable contributions of 253 dedicated members of the HundrED Academy 2026.

We highlight members whose participation stands out on two levels: Those who reviewed over 80 percent of their assigned innovations are awarded Special Mention, and Honorary Distinction is conferred on those reviewed three or more Global Collections. Please see [Appendix B](#) for more information on the Academy's role in the selection process, and [Appendix C](#) for a list of HundrED Academy 2026 members.

ACADEMY VOICES

Junior Academy

"Being part of the HundrED Academy has truly been one of the most meaningful experiences of my journey so far. It felt incredible to be trusted with the responsibility of reviewing innovations that are changing lives and shaping the future of education.

Every story I read touched me, inspired me, and reminded me that small ideas, rooted in love and purpose, can create global impact. I'm so grateful to have had this opportunity – it didn't just teach me about innovative solutions, it reminded me why I care about making a difference." – **Hardik Chaudhary**

"Hats off to Hundred Academy for giving students and teenagers the opportunity to review and get the knowledge about projects being done worldwide. I take extreme pleasure for being a part of it."

– **Sudarshini G. S.**

"Being a part of the HundrED Junior Academy was fantastic! I was exposed to a whole new world of inspiring innovative solutions across several areas. Some were devoted to making eating vegetables more appealing to kids, while others were prepping high schoolers for the world of work. All of them were so different, yet united by a common purpose:

reimagining education for young people. Thank you so much for this opportunity, and I hope to carry forward everything I've learned into my own journey as a changemaker." – **Aanyaa Garatkar**

"Being a part of the Academy is very interesting! It opens my mind about innovations that are unfamiliar and new to me. It's beyond description to see how wholesome all the changemakers around the globe are working together to improve the quality of our life. To add up, I find this academy as a bridge to sharpen my

research skills and to voice my opinion as they facilitate us with endless information to explore." – **Zahra Faiha Askana**

Academy

"Being part of the HundrED Academy was an incredibly inspiring experience. The review process was thoughtfully designed—clear, well-structured, and intellectually engaging. It allowed me to explore groundbreaking innovations from around the world and reflect on how global ideas can be adapted to local contexts." – **Nam Ngo Thanh, School Leader, Academic Director, B. School**

"Being part of the HundrED Academy as a 19-year-old youth was a truly eye-opening experience. The review process allowed me to explore innovative educational solutions that went beyond traditional learning – touching on themes like play, gender equality, digital literacy, green skills, and more. The tools made it easy to evaluate each innovation thoughtfully, and it was inspiring to see how education is evolving to meet the diverse needs of learners worldwide." – **Myat Pan Khit, Chemical Engineering Student, SIIT - Thammasat University**

"Being part of the HundrED Academy has been an enriching and inspiring experience. Reviewing 18 global education innovations gave me a front-row seat to the creativity, commitment, and impact educators are driving around the world. The review process was well-structured and supported by clear guidance, which made it easy to engage meaningfully with each submission. I especially appreciated the emphasis on evidence of impact and scalability—it allowed me to think critically about how these innovations could be adapted in Kenya. It's been a rare honor to contribute to shaping the top 100 innovations in the Global Collection 2026." – **Nabwire Karen Kilwake, Co-Founder, Research & Communications Lead, Digital Pastoralist Africa**

Photo by Alpha Tiles.

ACADEMY CHOICE FEATURED INNOVATION

Teaching at the Right Level (TaRL) has been named the **Academy Choice** for the HunderED Global Collection 2026, after receiving the highest overall scores for both its impact and scalability. Academy reviewers commended its proven effectiveness across diverse contexts, supported by series of rigorous Randomised Controlled Trials and successful adaptation in more than twenty countries and thirty languages. They praised its simplicity, scalability, and human-centred design, which empowers educators and volunteers to reach the most marginalised learners through low-cost, accessible methods.

"Over two decades ago in India, we realised that despite being in school for a number of years, many children still struggled with basic reading and arithmetic. A solution was urgently needed. Working closely with children, families, teachers, schools, and governments, we evolved the "Teaching at the Right Level" approach (TaRL). This method has helped children who were eight and older "catch up" and quickly acquire foundational skills. Since then, TaRL has iterated and been adapted to be effective in a variety of contexts, both in India and globally.

Often called "CAMaL," meaning "amazing" in several Indian languages, TaRL feels magical when it comes alive in classrooms worldwide. In a matter of days and weeks, children are transformed. In the years to come, we hope to continue working closely with different people and partners across the world to ensure that every child is in school and learning well." – **Dr. Rukmini Banerji, CEO, Pratham Education Foundation**

YOUTH CHOICE FEATURED INNOVATION

Selected by the HunderED Junior Academy as the **Youth Choice** for the Global Collection 2026, **Girl Boss Program** by Launch Girls was recognised for its inspiring mission to empower girls to become confident, independent, and future-ready leaders. Young reviewers praised its relevance to their generation, noting how it helps girls "find their voice" and "learn real-world skills that shape their future."

Active in sixteen countries through strong partnerships, Girl Boss blends mentorship, practical training, and social change to give girls across South Asia and Africa the tools and confidence to build their own paths.

"Girls aren't just participants in Girl Boss; they are architects of its future. Our Girl Squad, comprising current participants and alumni, sits at the heart of our innovation, informing every aspect of our programming and co-creating solutions alongside us. This youth-centered approach ensures our work remains relevant, responsive, and transformative.

As we look ahead, girls will continue to guide how our programs evolve, ensuring each iteration serves their needs more powerfully. Our alumni communities will become engines of change, with graduates supporting successive generations. This intergenerational model builds a sustainable movement where young women lift each other up, creating ripples of impact beyond classrooms. When girls are trusted as leaders and innovators, they don't just imagine a more inclusive world, they build it." – **Neha Sahu, Co-founder and Co-CEO, Launch Girls**

**ACADEMY MEMBER OF THE YEAR:**

We extend our heartfelt thanks to Sheeba Ajmal for her exceptional commitment to the HundrED Academy. This year, she reviewed two full batches, or thirty-six innovations in total, continuing her long-standing record of reviewing nearly every Global Collection since 2019. As one of our distinguished Academy Members with Honorary Distinction, she has continuously demonstrated dedication to ensuring the quality and rigor of the Global Collection. We are deeply grateful for her time, energy, and expertise in supporting our effort in identifying the world's most impactful and scalable education innovations.

"As always it has been truly an honour to be part of the HundrED Academy. Reviewing the innovations extends my own understanding and knowledge about how we can provide quality education to all learners irrespective of social class,

religion or ethnicity, in innovative ways. I was awe-inspired by the innovations and the amazing work educators around the globe are doing to provide quality education experiences to the under-privileged children in the community. Reviewing innovations every year is my window to the world, and every time I open this window I see fantastic ideas that are transforming education in a true sense around the globe." – **Sheeba Ajmal, Founder & CEO at Technology For A Cause - Enhancing Skills Empowering Kids**

Hall of Fame Innovations

Sustaining Impact: The HundrED Hall of Fame

The HundrED Hall of Fame is a special category within our Global Collection that recognises education innovations demonstrating sustained growth in impact and scalability over time, as well as responsiveness to the evolving needs of learners worldwide. First introduced in 2021 for the Global Collection 2022, the HundrED Hall of Fame honors those innovations who have been selected to the HundrED Collections (Global and/or Spotlight) multiple times and have continued to show significant scale with proven impact and community engagement.

While no new inductees were added this year, the Hall of Fame remains a living showcase of pioneering work that continues to inspire the global education community. In the following section, we share updates provided directly by Hall of Fame innovators, highlighting the latest developments, milestones, and lessons from their journeys since 2024. The percentage changes shown in parentheses show changes from the previous year unless otherwise noted.

BRAC Remote Play Labs

Bangladesh

BRAC's Play Lab approach continues to expand and adapt in new contexts and geographies. It has grown to impact 497,000 children, and has expanded to a total of five countries. We applied to the HundrED Spotlights on EdTech: Bangladesh, Wellbeing in Schools, and Child-Centred Learning to further the reach of our innovation and connect with other partners working in the space. HundrED collections have been a great opportunity to gain exposure and networks around our areas of work. BRAC representatives have attended the HundrED Summit and continue to engage with online content and peers in the education space.

Design for Change

India

The DFC Innovation Playbook features fifteen innovations from thirteen countries, showcasing how partners apply the FIDS model through gamification, toolkits, platforms, and more. Over the past year, growth has been reflected not only in reach but also in depth of engagement, with more schools embedding the approach into curricula and students leading projects independently. Expansion into new regions and diverse school types, training more teachers, and developing new toolkits have strengthened adoption and sustainability. Key insights highlight the shift from awareness to agency, the teacher's role as enabler, and the importance of socio-emotional learning and systemic integration.

Eco-Schools is the largest global sustainable schools programme.

[→ VISIT WEBSITE](#)

Eco-Schools

Denmark

In the past year, the Eco-Schools programme has expanded its reach to 1.9 million more learners and 628,000 teachers, deepening the quality of its activities with webinars, new handbooks, and online courses to support schools, educators, and coordinators in building capacity for applying the Eco-Schools Seven-Steps framework. One of our deep insights is that Education for Sustainable Development (ESD) must go beyond knowledge transfer, connecting with learners on an emotional and practical level, transforming climate anxiety into eco-agency. ESD provides the structure; networks and peer-to-peer learning provide the power to make systemic impact, positioning Eco-Schools as a climate action programme and driver of educational transformation.

Educate! prepares youth in Africa with the skills to succeed in today's economy.

[→ VISIT WEBSITE](#)

Educate!

Uganda

Recognition from HundrED has strengthened our credibility and validated Educate!'s effectiveness. In the past year, Educate! advanced two key outcomes that capture our work preparing youth for the labour market. We supported the Government of Tanzania in launching a lower secondary four-year Business Studies subject while continuing to scale our livelihood bootcamps in Kenya and Uganda. Government support is a marker of progress: the president endorsed the Business Studies subject, signaling a national commitment to tackling the youth employment challenge and advancing systematic change. Our key insight: meaningful impact in education and livelihoods requires balancing system level change with community relevance.

Teaching at the Right Level (TaRL)

India

Low foundational skills are a global education challenge. The TaRL approach, pioneered by Pratham in India and rigorously evaluated, helps children learn faster by meeting them where they are. Instead of teaching by age or grade, TaRL focuses on each child's current learning level to help them build skills and catch up. TaRL has been adapted in over twenty countries with promising results across contexts.

Appendix A: Categories

In previous years, HundrED has encouraged innovators to create their own or select from a list of featured or predefined categories. To streamline information for our trend analysis, we have requested for the 2026 Collection submission period that all innovations select up to eight categories, or “Keywords” within four classifications: Focus, Skills, Methods, and Tools. Below we list all the Keywords available, noting that innovations for which pages were created prior to our revision process may have selected more than eight keywords and/or created custom categories. Subcategories in **bold text** indicate the ones that were selected by Global Collection 2026 innovators.

FOCUS			
Access to Education	Bilingual Education	Boys Education	Bullying prevention
Child Protection	Children's rights	Climate education	Curriculum
Digital Divide	Displaced Children	Diversity Inclusion	Early Childhood
Education in Emergencies	Educational Equity	Environmental Education	Gender Responsive Education

Learning Environments	LGBTQIA+	Low Resource	Mental Health
Migrants	Multiculturalism	Multilingual Education	Nature
Neurodiversity	Nutrition	Out of School Children	Peace Education
Physical Education	Physical Health	Poverty	Racial Equality
Refugees	Respectful relationships	Rural Education	School Leadership
Science	Sex and Relationships	Social Justice	Special educational needs and disabilities
STEM Education	Student Voice and Agency	Sustainability	Sustainable Development Goals SDGs
Teacher Agency	Teacher Professional Development	Teacher Training	Vocational Education
Wellbeing	Youth-led Innovation		

METHOD			
After School Programs	Arts Integration	Assessment	Blended Learning
CLIL (Content Language Integrated Learning)	Collaborative Learning	Community Partnerships	Dramatic Arts
EdTech	Flipped Classroom	Formative Assessment	Gamification
Homeschooling	Inquiry-based learning	Maker Education	Medium of Instruction
Mobile Learning	Multi-disciplinary learning	Online platforms	Open resource platforms
Peer Learning	Personalised Learning	Play	Project Based Learning
Real World Learning	Remote Learning	Role-Play	Self-assessment
Storytelling	Student Mentoring	Student-Led	Tech-Based Learning
Theater	Whole-School Models		

SKILL			
21st Century Skills	Architecture	Career Skills	Civics
Coding	Communication	Compassion	Computer programming
Creative Thinking	Critical Thinking	Dance	Design Thinking
Digital Skills	Drama	Electronics	Empathy
Entrepreneurship	Financial skills	Foundational Skills	Interdisciplinary
Interpersonal Skills	Language Learning	Leadership	Life Skills
Literacy	Mathematics	Media Literacy	Mindfulness
Multilingualism	Music	Numeracy	Poetry
Public Speaking	Resilience	Robotics	SEL (Social and Emotional Learning)
Self-esteem	Skills Training	Social Skills	Technical Skills
Visual Arts	Workplace Skills	Written and Spoken Arts	

TOOL			
Artificial Intelligence	Augmented Reality	Books	Crafting Materials
Digital Programmes	Games	Networks	Playground
Radio	Scratch	Sustainable Resources	Virtual Reality

Appendix B: Methodology

The selection process follows [HundrED's methodology and definitions of innovation, impact, scalability, and evidence base](#), all of which innovations must demonstrate to progress through each phase.

PHASE 1: SEARCH AND SUBMISSIONS

During the annual call for Global Collection submissions, new innovations are added as innovators create their own pages—either independently or after being invited based on community recommendations or targeted searches by the HundrED Research Team. In addition, innovators who already have existing pages on the HundrED platform can choose to submit their innovation to the Global Collection. These may include innovations previously selected or shortlisted for past Global or Spotlight Collections. This year, total of 789 innovations were submitted.

PHASE 2: SHORTLIST

Based on HundrED's [Standards of Evidence](#) and using a [Holistic Evaluative Score](#), the Research Team thoroughly reviews each submitted innovation for its impact, scalability, and innovativeness. The curated shortlist of innovations is reviewed in the next phase. This year 148 were shortlisted for the next phase of the review process.

PHASE 3: ACADEMY REVIEW

Each year, hundreds of stakeholders in education, including educators, innovators, experts, leaders, and students, are recruited globally to form a HundrED Academy which evaluates the shortlisted innovations and makes recommendations towards the final selection.

This year, the Academy of 253 members from over 70 countries reviewed the innovations over a two-week period in June 2025. Shortlisted innovations were divided into eight batches with balanced representation of themes and geographic locations and were evaluated by at least sixteen Academy members. One separate batch was reviewed by the Junior Academy, involving 11 members. The plot diagrams in Figure 10 represent the total of 3,360 reviews made by the HundrED Academy 2026 ([Appendix C](#))

Figure 10: 3,360 Academy Reviews for the 2026 Collection

PHASE 4: FINAL SELECTION

The reviews by the Academy, both quantitative and qualitative, are thoroughly assessed by the Research Team during structured workshops, with innovations receiving the strongest evaluations are prioritised for inclusion, while also ensuring a geographically and thematically balanced representation in the final selection of 100 innovations.

LIMITATIONS

The methodology of this year's study also carries certain limitations, two of which called for particular attention.

The first relates to geographic representation. While HundrED's reach grows each year, some regions/countries remain underrepresented, and we continue to face challenges in securing submissions from these areas. This inevitably shapes the pool of innovations available for review and may limit the diversity of perspectives and practices highlighted in the Collection.

The second factor concerns language accessibility. Accepting submissions in multiple languages has opened opportunities for innovators who might otherwise have been excluded due to language barriers. At the same time, this has introduced a new challenge: Academy reviewers often rely on AI-generated translations to evaluate these innovations. Although machine translation is rapidly improving, there is still a risk of mistranslation or loss of nuance, which can affect the accuracy and fairness of the evaluation process.

The HundrED Research Team remains mindful of these limitations and is actively exploring ways to broaden outreach, strengthen linguistic accessibility, and ensure that all innovations are evaluated with rigor and equity.

HundrED Academy 2026

ACADEMY MEMBERS

The expertise of our Global Collection 2026 Academy members was essential in curating this set of 100 outstanding educational innovations. We are deeply grateful for their time, effort, and volunteerism. Academy Members who have reviewed three or more Global Collections are recognized with Honorary Distinction. At the end of this section, we highlight those with **Honorary Distinction** who also served as reviewers for the 2026 Collection. Members who completed 80 percent or more of their assigned reviews this year receive a **Special Mention** (indicated with an asterisk*).
